Application No. 09/729,882 Page 2 of 5

AMENDMENT

In the Claims

- 1. (twice amended) A method for manufacturing an integrated optical circuit on a substrate, the substrate having a first region and a second region distinct from the first region, the method comprising the steps of:
 - forming a first mask on the substrate, the first mask defining a pattern corresponding to at least one optical device to be formed in the first region of the substrate;
 - forming a second mask on the substrate, the second mask defining a pattern corresponding to an optical structure to be formed in the second region of the substrate; and
 - etching the substrate having simultaneously thereon the first and second masks, in order to form at least one optical device and the optical structure on the substrate
 - wherein said etching comprises using a predetermined etching gas, and said first and second masks are made of a material which substantially resists the predetermined etching gas.
- Claim 4 (Currently cancelled).
